

➤ Motivation

Our motivation for choosing this project stems from both **real-world need and social responsibility**. Every year, thousands of pets are abandoned or left without homes. Stray animals struggle with hunger, diseases, and lack of shelter. At the same time, many families and individuals want to adopt pets but lack a **trustworthy, simple, and easily accessible platform** to connect with adoption centers or pet owners.

By creating a **Pet Care Website**, our team intends to provide a **socially impactful web solution**. This project aligns with emerging technologies such as responsive web design, user-friendly UI/UX, and future integration with backend APIs and databases. It also reflects a **real-world problem** where digital solutions can play a role in reducing stray populations and improving adoption systems.

From an academic perspective, the project allows us to **apply theoretical knowledge** of web development into practice. As students, this is a meaningful opportunity to combine **technical learning** with **social contribution**.
